Sol. Step I: Let us start with the detail solution. As given in the diagram that there is a line-1 RA and Six people Mohan, Sohan, Rohan, Ankit, Vinit and Sumit are standing in line 1-RA. All of them are facing north. With distance between them increasing in multiples of 7 from the left end (i.e. suppose Mohan is left end of the line at point R then the remaining people will stand at a distance as follows -7m, 14m, 21m.... from the end). So, the arrangement will be----

In this arrangement the distance between two persons standing next to each other is seven whereas from first person standing at left end the distance will be in multiple of 7. And as the total length of the line is 39m and five persons are standing in the line at a distance of multiple of 7 so it will be 35m, remaining distance will be 39-35=4m from the right end. Step II: Now, let us start with the sitting arrangement of line 1-RA. Mohan is standing at the left end of the line. Two persons are standing between Mohan and Sohan. Rohan stand second to the left of Sohan.

Step III: Sumit is an immediate neighbor of Rohan. Only one person stands between Sumit and Ankit. So, the final arrangement of line1-RA is-----

Step IV: Similarly, six people Anita, Ambika, Amrita, Aanchal, Arpita and Ajita are standing in line-4 UD. All of them are facing south. with distance between them increasing in multiples of 9 from the end (i.e. if first person is left end of the line at point U and the remaining will be stand at the distance as follows-9m, 18m,27 m....from point U)

In this arrangement the distance between two persons standing next to each other is nine whereas from first person standing at right end the distance will be in multiple of 9. And as the total length of the line is 49m and five persons are standing in the line at a distance of multiple of 9 so it will be 45m, remaining distance will be 49-45=4m from the right end.

Step V: Amrita is standing is at 3rd position from the right end. Arpita is an immediate neighbor Of Amrita. Two people are standing between Arpita and Ajita. From this there can be two possible cases-----

Step VI: More than three persons stand between Ajita and Anita. Aanchal stands to the immediate left of Ajita. Ambika and Arpita are immediate neighbours. So, case-1 will be eliminated and the final arrangement of line 2-UD is-

Answer:

Sol. In this input output question only numbers is arranged in each step. Let us understand the logic behind it- In each step the numbers are arranged

In step 1: all the even number (input) are multiplied with 2 and all the even numbers are multiplied with 3.

Step 2: Is given in the pattern as firstly the numbers are subtracted and then added respectively.

Step 3: The resultant of the multiplication of its digits in the previous step.

Step4: The numbers in the previous step is divided by 2.

In odd numbered steps such as I, III and V the word is getting arranged from the left end while the number is getting arranged from the right end. While in even numbered steps such as II and IV the numbers are arranged from the left end while the words are arranged from the right end. For step I- The word which is first according to the alphabetical order is arranged from the left end while the highest number is arranged from the right end and so on in the odd steps. For step II- The number which is lowest is arranged from the left end while the word which is last according to the alphabetical order is arranged from the right end and so on in even steps. Also while arranging each of the number is added by 1 and 'er' is removed from each word while arranging.

 D and A are vertically inline so $DE = AF$,
 $DE = 6m$, $EC = 15 - 6 = 9m$
 It is given that $EC < 10$ so $DE = 6m$ and $AB = 12m$
 Hence $FB = 6m$

Direction (4-8): Study the information carefully and answer the questions given below.

There is 3*5 matrix which can produce signals which in turn help in the illumination of some bulbs. The row of the matrix are denoted by @, % and # from bottom to top and the columns are denoted by the alphabets A, B, C D and E from left to right. : **(SBI PO 2019)**

@ row contains number which are consecutive multiple of 7, starting from 28 (from left to right).

% row contains number which are consecutive multiple of 11, starting from 11 (from left to right).

row contains number which are consecutive multiple of 13, starting from 13 (from left to right).

The matrix helps in producing signals which can be either a single string of number X- or two-line string X and Y.

There are 4 lights P, Q, R and S. Based on the outcome of the strings mentioned above one of the light blinks.

Condition for blink:

1. If the outcome is below 85, then P will blink
2. If outcome range is 85-110, then Q blinks
3. If outcome range is 111-210, then R blinks
4. If outcome is greater than 210, then S blinks

For outcome of the string:

1. If the string has all even numbers, then outcome of the string is obtained by adding all the numbers.
2. If an odd number is followed by an even number then the one's places of all the two-digit numbers are deleted and, tenth place are multiplied to get the outcome
3. If the string contains 2 prime number, then the tenth's place is deleted from each of the two-digit number and remaining number are multiplied.
4. If no above logic is followed, then simple outcome is addition of the numbers.

4. If $x = \#C \%D \#A \#E$, then which bulb blink?

In alphabetical series A-Z each letter except vowels is assigned a different number from 1-8 (for ex- B is coded as 1, C-2.....K-8)and again those numbers get repeated(for ex- L-1, M-2.....so on). **(IBPS PO 2017)**

Also each vowel is assigned a different symbol viz. #, \$, %, @, &.

In coded language-

"She is girl" is coded as - 76% #7 5#61

"What did you like" is coded as - 26\$8 3#3 4@& 1#8%

"It is famous" is coded as - #8 #7 4\$2@&7

(i) If both first and last letter of a word is vowel then the codes of both the vowels are interchanged.

(ii) If first letter of a word is vowel and last letter is consonant then both are to be coded as *.

(If the word does not satisfy the conditions given above then the letters of that word are to be coded as per the directions given above)

Answer:

Direction (1-3):

Sol. Alphabets- third letter from the right end of the given word.

Number- If the number of letters in the given word is odd then subtract three from the number and If the number of letters in the given word is Even then add four from the number.

First letter of each word represents specific symbols as below-

| | | | | | | | | |
|-------|---|----|---|---|---|---|---|---|
| words | W | M | S | R | E | P | T | F |
| code | ! | \$ | # | ^ | + | % | ~ | @ |

Example: World – 2 ! R

- 1. Ans. (a)
- 2. Ans. (e)
- 3. Ans. (c)

Direction (4-8):

Sol. From the above given conditions the matrix will be---

| | | | | | |
|---------------|----|----|----|----|----|
| Rows↓/Column→ | A | B | C | D | E |
| # | 13 | 26 | 39 | 52 | 65 |
| % | 11 | 22 | 33 | 44 | 55 |
| @ | 28 | 35 | 42 | 49 | 56 |

4. Ans. (c)

Sol. $x = \#C \%D \#A \#E$

So, $x = 39 \ 44 \ 13 \ 65$

As it is clear that condition (2) is applicable in the above ques so the outcome will be—

Outcome = $3 * 4 * 1 * 6 = 72$

As the outcome is below 85, so clearly P will blink.

5. Ans. (d)

Sol. $X = @A @C \#D \%B$

So, $X = 28\ 42\ 52\ 22$

As it is clear that condition (1) is applicable in the above ques so the outcome will be—

Outcome = $28 + 42 + 52 + 22 = 144$

As the outcome is 111-210, so clearly R will blink.

6. Ans. (c)

Sol. $X = \#A\%E \%A @B$

So, $X = 13\ 55\ 11\ 35$

As it is clear that condition (3) is applicable in the above ques so the outcome will be—

Outcome = $3 * 5 * 1 * 5 = 75$

As the outcome is below 85, so clearly P will blink.

7. Ans. (d)

Sol. $X = @A\#B@D\%C$

So, $X = 28\ 26\ 49\ 33$

As it is clear that condition (4) is applicable in the above ques so the outcome will be—

Outcome = $28 + 26 + 49 + 33 = 136$

As the outcome is 111-210, so clearly R will blink.

8. Ans. (a)

Sol. $X = @E\#D@D\#E$

So, $X = 56\ 52\ 49\ 65$

As it is clear that condition (4) is applicable in the above ques so the outcome will be—

Outcome = $56 + 52 + 49 + 65 = 222$

As the outcome is greater than 210, then S blink.
